EDUCATION

Stevens Institute of Technology – B.S. Computer Science, Minor in Applied Mathematics, 3.7/4.0 *Aug 2024 – Dec 2027*
Relevant Coursework: Algorithms, Data Structures, Computer Architecture & Organization, Principles of Programming Languages, Database Management Systems, Theory of Computation, Web Programming, Mathematical Foundations of Machine Learning, Discrete Structures, Linear Algebra, Intermediate Statistics
Honors: Upsilon Pi Epsilon (UPE), Dean's List (All Semesters), Presidential Scholarship, Edwin A. Stevens Scholarship

EXPERIENCE

Department of Computer Science, Stevens Institute of Technology **Hoboken, NJ**
Course Assistant, Introduction to Computer Science | Python *Sep 2026 – Present*
- Lead recitations, hold office hours, and grade for 30+ students while providing hands on one on one debugging and conceptual mentorship.

Stevens Institute for Artificial Intelligence (SIAI) **Hoboken, NJ**
Research Assistant | Python, Streamlit, Multimodal AI, Vision-Language *May 2026 – Aug 2026*
- Built an AI-powered clinical concept map assessment platform in collaboration with Hackensack Meridian School of Medicine, integrating multimodal LLMs, rubric based grading, evidence extraction, interactive dashboards, and configurable model selection.
- Benchmarked multimodal vision-language models against human rubric-based evaluations, analyzing scoring accuracy, consistency, hallucination patterns, explainability, and grader agreement across clinical concept maps to improve automated grading reliability.

GENIE AI **Remote**
Software Engineering Intern | NestJS, Node.js, PostgreSQL, Next.js, Docker, Jenkins, CI/CD *Oct 2025 – May 2026*
- Architected and shipped RESTful APIs for a property analytics platform, designing normalized PostgreSQL schemas supporting tenant workflows, property analytics, and usage metrics across 10+ microservices used by 3 cross functional teams and internal stakeholders.
- Diagnosed and resolved production data inconsistencies by tracing request flows across distributed systems, eliminating schema mismatches responsible for 15% of nightly batch failures while preventing recurring data loss across critical production services.
- Optimized Jenkins CI/CD pipelines by parallelizing test execution and introducing Docker layer caching, reducing deployment time from 15 to 2 minutes while enabling 4x more frequent production deployments and supporting faster, more reliable software releases.

TruClaim **Remote**
Software Engineering Intern | Flask, Python, PostgreSQL, REST APIs, CI/CD *May 2025 – Aug 2025*
- Built and deployed backend services for a production claims screening platform using Flask and PostgreSQL, implementing rule based validation workflows that reliably processed 200+ insurance claims weekly across multiple provider submissions and clinical specialties.
- Automated claims validation using Python and SQL triggers, eliminating 15 hours/week of operational overhead, reducing validation errors by 22%, and increasing test coverage to 85% through comprehensive unit and integration testing across core validation workflows.

PROJECTS

Next Chapter – **JPMorgan Chase Code for Good 2026** ↗ | Python, FastAPI, PostgreSQL, SQLAlchemy, React, REST APIs Oct 2026
- Led backend and database development for a 4-person hackathon team, architecting FastAPI REST endpoints and SQLAlchemy models on Supabase PostgreSQL to efficiently manage alumni profiles, employment histories, technical skills, and longitudinal career analytics.
- Built end-to-end resume ingestion and career personalization workflows, integrating rule based PDF parsing, skill aware Greenhouse job matching, and tailored monthly newsletters to drive sustained alumni engagement and long-term career outcome tracking.

IBM Docling ↗ | Python, Git, GitHub Actions, Pytest, Open Source *Jun 2026 – Aug 2026*
- Resolved a Windows resource leak in IBM Docling's document conversion pipeline by identifying incorrect backend ownership during pipeline initialization failures, implementing targeted cleanup logic, and preventing file handle leaks while preserving error propagation.
- Strengthened conversion reliability by adding regression tests for initialization and invalid-input cleanup paths, collaborating with maintainers and external contributors through code review, CI validation, and DCO compliance to deliver a merged upstream contribution.

OfferOS ↗ | Next.js, FastAPI, PostgreSQL, SQLAlchemy, TypeScript, Clerk, Docker *Jun 2026 – Aug 2026*
- Designed and built a comprehensive career management platform enabling authenticated users to track job applications, resumes, interview preparation, recruiting workflows, and career analytics in one unified workspace using Next.js and FastAPI.
- Architected a backend for multiple tenants using SQLAlchemy, Alembic migrations, and a repository pattern to enforce ownership based access across all REST endpoints, integrating Clerk authentication and Docker for consistent deployment across environments.

OpsPilot ↗ | Next.js, TypeScript, Slack APIs, GitHub APIs, OpenAI, PostgreSQL, Neon, Vercel *Jun 2026 – Jul 2026*
- Built and deployed a Slack AI engineering agent supporting multiple tenants with workspace specific Slack and GitHub OAuth, natural language conversations, repository audits, incident investigations, and interactive Block Kit workflows for engineering operations.
- Architected a reasoning pipeline built around specialized tools that correlates GitHub commits, deployment history, Slack context, and incident data to generate grounded risk assessments, test plans, release notes, and postmortems with persistent PostgreSQL context.

SKILLS

Languages: Python, TypeScript, Java, JavaScript, HTML/CSS, C++, SQL
Technologies: FastAPI, Node.js, React, Next.js, PostgreSQL, SQLAlchemy, Prisma, Docker, AWS, CI/CD (GitHub Actions, Jenkins), REST APIs, Git
Certifications: AWS Cloud Practitioner (2025) | AWS AI Practitioner (2026)
