

EDUCATION

Stevens Institute of Technology – B.S. Computer Science, Minor in Applied Mathematics, 3.7/4.0

Aug 2024 – Dec 2027

Relevant Coursework: Algorithms, Data Structures, Computer Architecture & Organization, Principles of Programming Languages, Mathematical Foundations of Machine Learning, Discrete Structures, Linear Algebra, Intermediate Statistics**Honors:** Upsilon Pi Epsilon (UPE) – International Computer Science Honor Society, Dean's List (All Semesters), Presidential Scholarship, Edwin A. Stevens Scholarship

EXPERIENCE

Department of Computer Science, Stevens Institute of Technology**Hoboken, NJ***Incoming Course Assistant, Introduction to Computer Science & Discrete Structures | Python*

Aug 2026 – Dec 2026

- Selected as Course Assistant for Introduction to Computer Science and Discrete Structures based on outstanding academic performance.

Stevens Institute for Artificial Intelligence (SIAI)**Hoboken, NJ***Research Assistant | Python, FastAPI, Next.js, Multimodal AI, Vision-Language Models*

May 2026 – Present

- Built a full-stack platform for AI-powered clinical concept map assessment in collaboration with Hackensack Meridian School of Medicine, integrating multimodal LLMs, rubric-based grading, evidence extraction, interactive dashboards, and configurable model selection.
- Benchmarked multimodal vision-language models against expert-generated concept maps, evaluating scoring accuracy, consistency, hallucination patterns, explainability, and agreement with human-generated rubric assessments to improve automated grading reliability.

GENIE AI**New York, NY***Software Engineering Intern | NestJS, Node.js, PostgreSQL, Next.js, Docker, Jenkins, CI/CD*

Oct 2025 – May 2026

- Architected and shipped RESTful APIs for a property analytics platform, designing normalized PostgreSQL schemas supporting tenant workflows, property analytics, and usage metrics across 10+ microservices used by 3 cross-functional teams and internal stakeholders.
- Diagnosed and resolved production data inconsistencies by tracing request flows across distributed systems, eliminating schema mismatches responsible for 15% of nightly batch failures while preventing recurring data loss across critical production services.
- Optimized Jenkins CI/CD pipelines by parallelizing test execution and introducing Docker layer caching, reducing deployment time from 15 to 2 minutes while enabling 4x more frequent production deployments and supporting faster, more reliable software releases.

TruClaim**Remote***Software Engineering Intern | Flask, Python, PostgreSQL, REST APIs, CI/CD*

Jan 2025 – Aug 2025

- Built and deployed backend services for a production claims screening platform using Flask and PostgreSQL, implementing rule-based validation workflows that reliably processed 200+ insurance claims weekly across multiple provider submissions and clinical specialties.
- Automated claims validation using Python and SQL triggers, eliminating 15 hours/week of operational overhead, reducing validation errors by 22%, and increasing test coverage to 85% through comprehensive unit and integration testing across core validation workflows.

PROJECTS

RecruitIQ [🔗](#) | Next.js, React, TypeScript, Amazon Aurora PostgreSQL, Prisma, Vercel (Amazon AWS Hackathon)

Jun 2026 – Present

- Built a full-stack AI-powered applicant tracking system using Next.js, Amazon Aurora PostgreSQL, Prisma, and Server Actions, enabling resume parsing, candidate ranking, Recruiter Copilot analysis, Kanban pipeline management, and hiring analytics.
- Engineered a production-ready backend using Amazon Aurora PostgreSQL, Prisma ORM, deterministic resume extraction, configurable OpenRouter integration, and server-side AI fallbacks to deliver reliable, explainable candidate evaluation workflows.

ConsensusIQ [🔗](#) | Next.js, FastAPI, Azure AI Search, Python, TypeScript (Microsoft Agents League Hackathon)

May 2026 – Jun 2026

- Built a multi-agent AI decision support platform using FastAPI, Next.js, and Azure AI Search, orchestrating specialist agents to generate evidence-backed recommendations through disagreement analysis, consensus reasoning, and confidence-based decision support.
- Engineered a retrieval-augmented architecture integrating Azure AI Search, deterministic fallback logic, configurable LLM providers, and interactive decision dashboards to improve recommendation transparency, reliability, and evidence traceability across complex decisions.

AI Clinical Ops Agent [🔗](#) | FastAPI, Next.js, PostgreSQL, Docker, Python, LLMs

Feb 2026 – May 2026

- Built a full-stack AI-powered clinical billing review platform using FastAPI, Next.js, PostgreSQL, and LLMs to analyze operative notes, identify documentation gaps, recommend CPT codes, assess billing risk, and streamline coding workflows with explainable AI insights.
- Engineered a production-ready backend with Pydantic validation, deterministic fallback logic, SQLAlchemy, Alembic migrations, Pytest integration testing, PHI detection, Docker deployment on Render, and a secure Next.js frontend on Vercel with role-based authentication.

Gym-Risk [🔗](#) | Next.js, React, TypeScript, PostgreSQL, Prisma, NextAuth, Tailwind

Oct 2025 – Mar 2026

- Built a full-stack training load analytics platform using Next.js, PostgreSQL, Prisma, and NextAuth, designing a normalized relational schema supporting workout history, reusable templates, dynamic exercise search, a library of 100+ exercises, and scalable data management.
- Developed an explainable workload analytics engine computing Acute-to-Chronic Workload Ratio (ACWR), session load, workload trends, and high-RPE exposure, complemented by interactive dashboards, SVG visualizations, and muscle heatmaps for athlete risk assessment.

SKILLS

Languages: Python, Java, SQL, TypeScript, JavaScript, HTML/CSS**Technologies:** FastAPI, Node.js, React, Next.js, PostgreSQL, SQLAlchemy, Prisma, Docker, AWS, CI/CD (GitHub Actions, Jenkins), REST APIs, Git**Certifications:** AWS Cloud Practitioner (2025) | AWS AI Practitioner (2026)
